- > Very low noise
- > High reliability
- > Minimal depth in enclosure
- > Time-saving installation and mat exchange
- > High through-flow air volume

Roof filter fans find use in enclosures and housings, from which warm air has to be diverted to lower the internal temperature. These low-noise roof filter fans are used to expel warm air from within the enclosure which has been generated by the stray power of the components and so protects the internal devices from overheating. To exchange the filter mat the hood can be easily opened without tools. The roof exit filter provides passive ventilation.
