

## HAZEMEYER NEWS

HAZEMEYER is proud to announce a major effort in the upgrade of the COMBIESTER range, refurbishing the complete group of moulds and improving the mounting plate fitting:

Polished and rectification of the moulds, offering a better final aesthetic finishing with a cleanest look.

Due to the moulding modifications the new boxes will be supplied with different cover screws. The new product incorporate a spot of colour in the internal bottom side of the box for a better identification.

Replacing the old copper fitting points to a new technical micro smelter aluminium insert, easy to screw on and with 100 % warranty of no polyester pollution in the screwing area.

This modification close the COMBIESTER range to the present ROHS standards because of its easy recycling performance.

Today , HAZEMEYER with it's COMBIESTER range, makes a important step forward towards the accomplishing of the present and future demands of the international industrial-electrical market.

During the rest of the year, all the COMBIESTER boxes will be upgraded with this improvements.

We hope that this modifications will be welcome from your side,

Yours sincerely,
